

CS400 PROJECT UPDATE REPORT LOG

Week 1 - Requirements Gathering and Scope Finalisation

Student Name / ID	Rahul Chand / _____
Project Title	Car and Rental Equipment Management System (CREMS)
Supervisor	To be confirmed
Report Number	1
Reporting Period	Week 1: 10-14 August 2026

1. Planned tasks

Research the customer journey and prepare questions covering enquiries, availability, quotations, booking, agreements, notifications and booking-status tracking.

2. Tasks completed during this period

I contributed to mapping the customer journey from browsing available services through enquiry, quotation and booking. I helped document that customers may be individuals or corporate accounts and may hire from different divisions. I recorded requirements for booking confirmation, reference-number tracking, rental agreements, email notifications and a simple experience for customers who only need a vehicle.

3. Progress against plan

The main customer journey is progressing according to the Week 1 plan. Important decisions remain open, including which services can be booked immediately, which require a quotation, and what information corporate customers must provide.

4. Pending tasks and next actions

Create customer journey diagrams, draft enquiry and booking data requirements, clarify quotation acceptance and cancellation rules, and list notification events and customer-facing status descriptions.

5. Issues faced and how they were addressed

A single portal could overwhelm ordinary vehicle-rental customers when shipping and heavy-equipment services are also present. I addressed this by proposing division and service selection first, followed by a guided workflow that reveals only relevant fields.

6. Learning journey and SFIA reflection

I learned that user-friendly design begins during requirements gathering. My SFIA business-skills level is developing because I can relate customer needs to process requirements and communicate them to the team. I need to improve the way I validate usability assumptions with real users and turn journeys into testable acceptance criteria.

7. Peer contribution and review

I contributed the customer perspective and reviewed it with the team. Other members connected the customer journey to asset availability, security, approvals and financial reporting.

Evidence available: client meeting notes, agreed scope list, team planning records, requirements questions and Carpenters division research.

DECLARATION AND REVIEW

I confirm that I have reviewed this report and that it represents my individual contribution and reflection for the reporting period.

Signed (Student)		Date	
Peer review comments	Peer reviewer to confirm that the contribution described above is consistent with the team records.
