

CS400 PROJECT UPDATE REPORT LOG

Week 1 - Requirements Gathering and Scope Finalisation

Student Name / ID	Shoneel Kumar / _____
Project Title	Car and Rental Equipment Management System (CREMS)
Supervisor	To be confirmed
Report Number	1
Reporting Period	Week 1: 10-14 August 2026

1. Planned tasks

Research the operational lifecycle of rentable vehicles and heavy equipment and prepare questions about asset information, maintenance, inspections, allocation and return procedures for the client meeting.

2. Tasks completed during this period

I contributed questions and notes concerning the asset lifecycle. I identified the need to capture asset identity, category, branch, division, availability, meter readings and maintenance history. During the client discussion, I focused on the requirement for pre-rental and post-rental checklists and the need to record detailed maintenance expenditure. I helped distinguish vehicle use measured in kilometres from equipment use measured in operating hours.

3. Progress against plan

My assigned Week 1 requirements tasks were completed as planned. The lifecycle has been outlined at a business level, but detailed checklist fields and maintenance approval rules still require client confirmation.

4. Pending tasks and next actions

Draft the asset and maintenance requirements, propose lifecycle states, list required inspection evidence, and prepare questions about service intervals, damage responsibility, warranty work and disposal.

5. Issues faced and how they were addressed

Different asset categories do not follow exactly the same workflow. A vehicle, forklift, generator and container may use different meters, inspections and maintenance triggers. I addressed this by proposing configurable asset categories and meter types instead of assuming one vehicle-only process.

6. Learning journey and SFIA reflection

I learned to model requirements around business events rather than around one screen. My SFIA complexity level is developing because I can analyse several related workflows with guidance. I need to improve how I validate exceptions and ensure that proposed lifecycle states use the language followed by Carpenters staff.

7. Peer contribution and review

I contributed the asset and maintenance perspective to the team discussion. Team members helped connect these requirements to finance, customer booking and access-control needs.

Evidence available: client meeting notes, agreed scope list, team planning records, requirements questions and Carpenters division research.

DECLARATION AND REVIEW

I confirm that I have reviewed this report and that it represents my individual contribution and reflection for the reporting period.

Signed (Student)		Date	
Peer review comments	Peer reviewer to confirm that the contribution described above is consistent with the team records.
