

CS400 PROJECT UPDATE REPORT LOG

Week 1 - Requirements Gathering and Scope Finalisation

Student Name / ID	Sudhansu Jayshil Kisun / _____
Project Title	Car and Rental Equipment Management System (CREMS)
Supervisor	To be confirmed
Report Number	1
Reporting Period	Week 1: 10-14 August 2026

1. Planned tasks

Investigate user roles, data security, divisional access and reporting needs, and prepare client questions about who can view, approve and modify information.

2. Tasks completed during this period

I reviewed the proposed Administrator, Branch Manager and Rental Officer roles and contributed to the discussion on division and branch restrictions. I documented the client security expectations for API timeouts, session expiry and controlled browser sessions. I also recorded reporting requirements for asset revenue, operating expenses, maintenance costs, overdue rentals and audit history.

3. Progress against plan

The Week 1 role and security requirements have been identified at a high level. Detailed permission matrices, session values and report definitions remain pending because they require business and technical approval.

4. Pending tasks and next actions

Prepare a role-permission matrix, identify sensitive data fields, define audit events, document session and API security requirements, and clarify whether future division-level management roles are required.

5. Issues faced and how they were addressed

Some role names describe job titles, but access also depends on branch and division. I addressed this by documenting role and data scope as separate concepts. This will allow the same role to have different permitted records without creating many hard-coded roles.

6. Learning journey and SFIA reflection

I developed my understanding of least-privilege access and requirements traceability. My SFIA influence is currently team-focused: I can explain security concerns and support decisions, but security settings must be reviewed by the supervisor and client. I need to improve threat identification and write more measurable non-functional requirements.

7. Peer contribution and review

I presented the access and security considerations to the group. The team reviewed how these controls would affect customer, rental, maintenance and reporting workflows.

Evidence available: client meeting notes, agreed scope list, team planning records, requirements questions and Carpenters division research.

DECLARATION AND REVIEW

I confirm that I have reviewed this report and that it represents my individual contribution and reflection for the reporting period.

Signed (Student)		Date	
Peer review comments	Peer reviewer to confirm that the contribution described above is consistent with the team records.
